## NeoColab\_REC\_CS23231\_DATA STRUCTURES

### REC\_DS using C\_Week 6\_COD\_Question 5

Attempt : 1

Total Mark : 10

Marks Obtained : 10

### Section 1 : Coding

#### 1. Problem Statement

Jose has an array of N fractional values, represented as double-point numbers. He needs to sort these fractions in increasing order and seeks your help.

Write a program to help Jose sort the array using the merge sort algorithm.

#### ***Input Format***

The first line of input consists of an integer N, representing the number of fractions to be sorted.

The second line consists of N double-point numbers, separated by spaces, representing the fractions array.

#### ***Output Format***

The output prints N double-point numbers, sorted in increasing order, and rounded to three decimal places.

Refer to the sample output for formatting specifications.

### **Sample Test Case**

Input: 4

0.123 0.543 0.321 0.789

Output: 0.123 0.321 0.543 0.789

### **Answer**

```
#include <stdio.h>
#include <stdlib.h>

// You are using GCC
int compare(double a, double b) {
    //Type your code here
    return a>b;
}

void merge(double arr[], int l, int m, int r) {
    //Type your code here
    int n1=m-l+1;
    int n2=r-m;
    double*L=(double*)malloc(n1*sizeof(double));
    double*R=(double*)malloc(n2*sizeof(double));
    for(int i=0;i<n1;i++){
        L[i]=arr[l+i];
    }
    for(int j=0;j<n2;j++){
        R[j]=arr[m+1+j];
    }
    int i=0,j=0,k=l;
    while(i<n1 && j<n2){
        if(!compare(L[i],R[j])){
            arr[k++]=L[i++];
        }else{
            arr[k++]=R[j++];
        }
    }
}
```

```

while(i<n1) arr[k++]=L[i++];
while(j<n2) arr[k++]=R[j++];
free(L);
free(R);
}
void mergeSort(double arr[], int l, int r) {
//Type your code here
if(l<r){
    int m=l+(r-l)/2;
    mergeSort(arr,l,m);
    mergeSort(arr,m+1,r);
    merge(arr,l,m,r);
}
}
int main() {
    int n;
    scanf("%d", &n);
    double fractions[n];
    for (int i = 0; i < n; i++) {
        scanf("%lf", &fractions[i]);
    }
    mergeSort(fractions, 0, n - 1);
    for (int i = 0; i < n; i++) {
        printf("%.3f ", fractions[i]);
    }
    return 0;
}

```

**Status :** Correct

**Marks :** 10/10
